

Hirst Avenue West Project Work

Residents should be aware of planned field work as part of the Hirst Avenue West streetscape and utility upgrades project on Tuesday, August 20.

This work is part of the sub-surface geotechnical investigation to assess the existing road structure, evaluate its condition and provide recommendations for detailed design. Up to six boreholes will be drilled and patched on Hirst Avenue West between McMillan Street South and the Alberni Highway. No work is planned within the intersections.

Traffic control personnel will be on site throughout the work and Hirst Avenue West will be open to vehicles at all times. Flow may be limited to one-way alternating traffic during portions of the work so minor traffic disruptions are expected. Sidewalks, driveways, and service accesses will not be blocked or impacted.

As this project progresses, the City's [website](#) will provide information about the project. Questions about the project should be directed to Engineering@Parksville.ca.
