

## **Commissioning of Highway 19A and Shelly Road Traffic Signal**

On Monday morning, April 1, Copcan Civil and Raylec Power as contractors for the City, will begin the process to initiate commissioning of the new traffic signal at Highway 19A and Shelly Road. The signal should be operational later in the day.

This new traffic signal will significantly improve public safety for pedestrians and vehicles at this intersection. We appreciate the patience of residents and the local businesses while this project was underway.

### **General traffic interruptions**

When necessary during commissioning, traffic will be controlled in all directions for vehicles and pedestrians. In order for this work to be completed, please expect interruptions to traffic flow including, lane closures, turning restrictions and intermittent alternating single-lane usage. The contractor will complete this work as efficiently and safely as possible and for the safety of the public, the instructions provided by traffic control personnel must be obeyed. Access to sidewalks and pedestrian crossings within the intersection will be dependent on the activity and should be used with caution and at the direction of traffic control personnel when present.
