

Stormwater Management in Parksville Community Park

Work is underway on a stormwater management master plan project for the Parksville Community Park. As part of this project, crews are now working in the park to survey and map infrastructure.

The work is expected to continue over the next few months with underground investigations occurring the week of March 2. Crews will do their best to minimize disruptions to park users; however, please allow the crews the required space to perform the work. We also ask for the public's patience and understanding while enjoying the Parksville Community Park during this time.

The City's Community Park Master Plan completed in 2018, identified the need for a stormwater management master plan for the park. The study will include:

- Mapping the locations, size and condition of current infrastructure
- Establish current and future stormwater management needs by monitoring and modelling
- Develop stormwater management design criteria
- Develop the conceptual design for the stormwater management facilities
- Complete financial assessments for the lifecycle of the facilities
