

Work on Bagshaw Streetscape and Utility Upgrades Begins

Work on the Bagshaw Streetscape and Utility Upgrades Project will begin this week and should be substantially complete in October. The project includes the replacement and upgrading of about 360 metres of utilities and roadway on Bagshaw Street between Stanford Avenue East and Island Highway East. The work includes storm sewer, watermain, ditch infilling, roadworks, streetlighting, and streetscape construction as well as traffic calming, street parking and an improved pedestrian experience.

Following engagement with businesses and residents on Bagshaw Street in 2020, the City selected a streetscape configuration responsive to the feedback received during public engagement. ISL Engineering Ltd. worked with the City and residents to complete the streetscape and utilities design and will provide construction inspection and contract administration services for the project. The construction contract has been awarded to Locar Industries Ltd.

As with all major construction projects, there will be some inconveniences during construction. We appreciate your cooperation and patience during these periods. Crews will maintain traffic flow and services; however, the public should expect temporary interruptions. For more information, please email engineering@parksville.ca.
