

Hello,

Construction on Hirst Avenue West (Hirst) between the Alberni Highway and McMillan Street South has been progressing on schedule, with the contractor Knappett Industries (2006) Ltd working to finish underground utilities. The water, sanitary, and storm mains and services have been replaced, and the crews are now working on the road base and concrete curbs.

The installation of new concrete curbs will cause brief interruptions to driveway access while the concrete cures. Where possible, Knappett staff will reach out to businesses and residents to coordinate these driveway access interruptions. If alternate accesses are available, please consider using them when visiting affected properties.

Once the new curbs are poured, the project team will be working towards a first coat of asphalt, weather permitting. In the meantime, landscaping and preparation for the installation of sidewalks will take place on Hirst. You may even see crews beginning work on Memorial Avenue, with activities such as surveying and locating underground utilities.

We appreciate your patience through construction and look forward to the improvements this work will bring. Please don't hesitate to reach out with questions along the way.

Thanks,

Ayla DeFoor, ASCT
